PROFESSIONAL SUMMARY

Second-year B.Tech student in Computer Science and Engineering (AI & ML) with hands-on experience building and deploying web applications using React.js, JavaScript, and Vite, along with Python-based AI projects using Gemini API, FAISS, and text embeddings. Interested in software development and AI-enabled applications, seeking an internship to apply technical skills to real-world problems.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, C++, SQL
- **Frontend:** HTML5, CSS3, React.js, Vite
- **Backend:** Node.js, Express.js, REST APIs
- **Databases:** MySQL, MongoDB
- **AI / Generative AI:** Gemini API, Text Embeddings, FAISS, Sentence Transformers, Retrieval-Augmented Generation (RAG)
- **Tools:** Git, GitHub

PROJECTS

AlgoVerse — Full-Stack Algorithm Learning Platform
React.js | JavaScript | Node.js | Express.js | MongoDB Atlas

- Developed a full-stack algorithm learning platform featuring interactive sorting and searching visualizations with step-by-step playback controls.
- Built REST APIs using Node.js and Express.js to support authentication, quizzes, bookmarks, and learning progress tracking.
- Integrated MongoDB Atlas to persist user data, quiz attempts, bookmarks, and learning progress.
- Implemented authentication and personalized learning features, including a dashboard and server-side quiz evaluation.

Live Demo: https://algo-verse-v2.vercel.app/
GitHub: https://github.com/HariSiddarth-JR/AlgoVerse

Semantic Search & RAG System | Python, Embeddings, FAISS, Generative AI

- Built a semantic search pipeline to retrieve relevant information based on the contextual meaning of user queries.
- Explored text embedding generation and vector similarity search to identify semantically related content.
- Applied Retrieval-Augmented Generation (RAG) concepts to connect retrieved context with LLM-based response generation.
- GitHub: https://github.com/HariSiddarth-JR/semantic-search-rag-system

Zyro HR RAG Assistant | Python, RAG, LLMs, Vector Search

- Developed an AI-powered HR assistant to answer employee questions using information retrieved from HR policy documents.
- Applied Retrieval-Augmented Generation (RAG) to combine relevant document context with LLM-generated responses.
- Designed a document-grounded question-answering workflow to help users access HR information through natural-language queries.
- GitHub: https://github.com/HariSiddarth-JR/zyro-hr-rag-assistant

EDUCATION

B.Tech — Computer Science and Engineering (AI & ML)
B.S. Abdur Rahman Crescent Institute of Science and Technology
Duration: 2025–2029
CGPA: 9.3/10

Class XII — CBSE
Velammal Vidhyashram | 2025 | 83.2%

Class X — CBSE
Velammal Vidhyashram | 2023 | 74.2%

CERTIFICATIONS & ACHIEVEMENTS

- **Vector Search in Practice: Semantic Search with LLMs** — NIAT Masterclass; delivered by Arpan Paul, Applied Scientist, Amazon (March 2026).
- **Applying Text Embeddings in LLM Systems** — NIAT Masterclass; delivered by Stuti Gupta, Data Scientist, Flipkart (February 2026).
- **2nd Prize — CODEVERSE Coding Contest | NIAT × Crescent Campus | 2026**
  Secured second place following evaluation of submissions and final validation criteria.
